Rainbow appears in the sky at the end of the rain. It is a long and wide band of seven colours. It forms a semicircle going from one end of the earth to the other. Scientists say that when sunlight passes through a thin medium to a denser medium, all the seven colours which are present in the white light form a semi-circular rainbow. The seven colours are violet, indigo, blue, green, yellow, orange and red. People believe that if a rainbow appears after the rain, it is an indication that there will be no more rains.
